USU’s College of Engineering press release reveals more detailed information about Dr. Jeff Horsburgh’s NSF CAREER Award research titled: “Cyberinfrastructure for Intelligent Water Supply.”

**Winning the Water War Starts with Winning the Battle on Data**

‘Smart’ water meters won't help resource managers interpret usage data without new analysis tools and a dependable urban water cyberinfrastructure. Engineering researchers at Utah State University are leading new developments in hydroinformatics and building the tools to collect, shrink and transform water data into useful information.” ...
