

USDA/ARS and Aggieair Research Featured in the December 2017 issue of USDA's AgResearch Magazine

12/18/2017

The December 2017 issue of AgResearch magazine (USDA) featured ongoing precision agriculture research that incorporates AggieAir's advanced scientific remote sensing technology and analytical products developed at the UWRL into ARS computer models. This research is providing the tools and data that will help California's vineyards better evaluate vine health and manage irrigation water more efficiently across differing soils and climate conditions.
